ABOUT

Petr Němec develops sound-based work across composition, performance, installation, and research. The portfolio brings together fixed media pieces, collaborative stage work, live situations, and technical experiments that connect listening with broader questions of image, text, embodiment, and environment.

Becoming Birdfish

Becoming Birdfish is a text/graphic score for two voices that functions as a guided imaginative situation. It does not use a fixed recitation text, but a series of instructions and questions that gradually shift the performers' attention from speaking to listening, from description to bodily experience, and from individual expression to dialogue within a shared sonic space. The score emphasizes communication beyond ordinary language: if words appear, the piece invites the performers to continue without a known language and to work with the voice as a physical gesture.

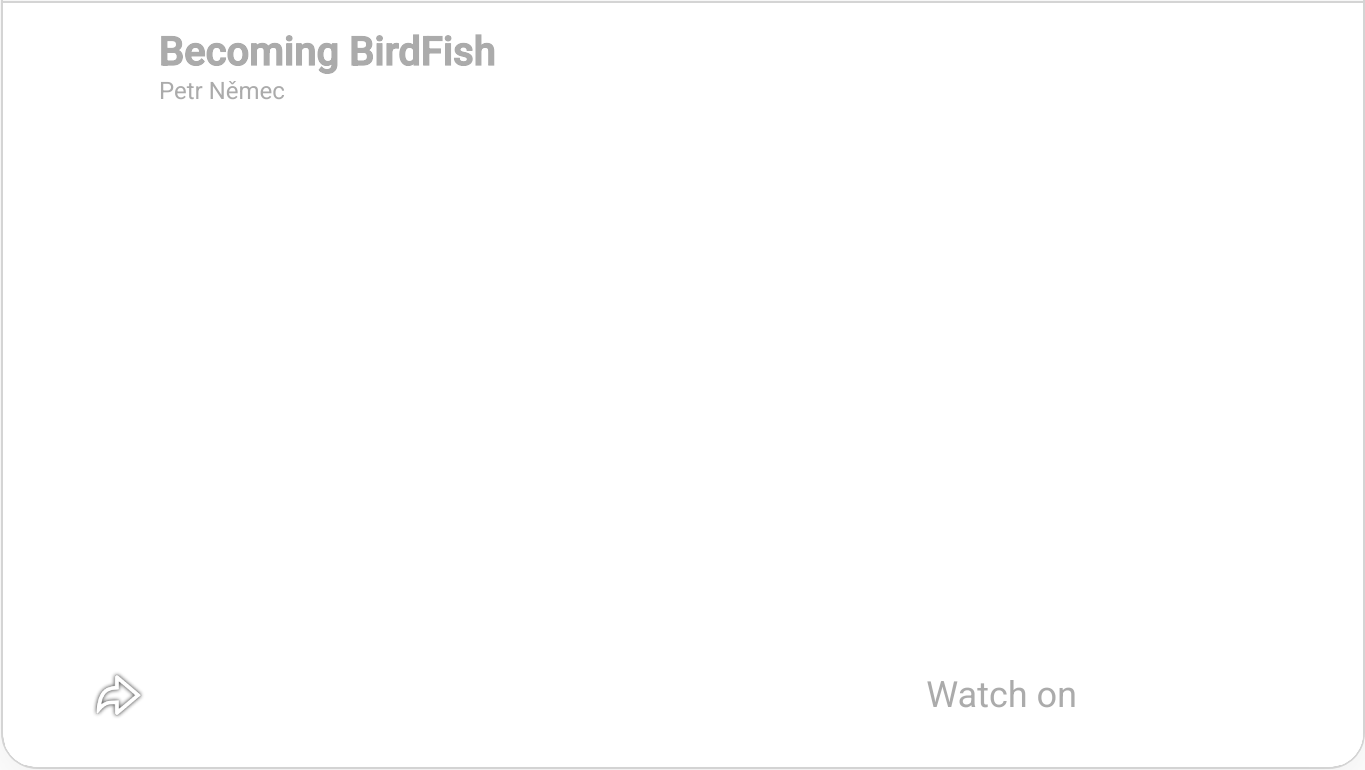
Voices: Bedřiška Ponížilová & Vojtěch Šembera



06-disconnected-v3-Stereo Out.wav

Moments when a connection breaks so another can be formed.
Looking for existence in the fragile space between imagination and reality, between memory and vision.

2025

Choreographer/Dancers: Vladena Klimek, Amálie Cuplová

RESEARCH

Exconv

The exconv research introduces an experimental toolkit for 1D and 2D FFT-based convolution, providing a unified framework for sophisticated cross-modal mappings between audio, images, and video. Through techniques such as spectral sculpting, the project establishes a bi-directional dialogue where audio spectra shape visual parameters like radial filters and YCbCr channels, while video frames can reciprocally influence sonic textures. Positioned as a technologically pioneering form of sound art, this work utilizes the digital signal chain to reveal phenomena unrecognizable to the eye by embracing an aesthetics of failure, including glitches and unconventional algorithmic processes.
